The Edible Balcony: Growing Fresh Produce In Small Spaces

Synopsis

You don't need a sprawling backyard or spacious raised beds to grow delicious fruits, vegetables, and herbs of your own. In *The Edible Balcony*, longtime urban gardener Alex Mitchell shows how to transform whatever space you have, from a balcony or rooftop to a fire escape or window box, into a profusion of fresh, seasonal produce. While raising your own produce is eco-friendly in itself, you'll learn how to plant, grow, and water as sustainably as possible to ensure your edible Eden remains green and productive all year long. Plus, with a collection of innovative, step-by-step projects for designing colorful pots and plant supports with recycled containers and other household paraphernalia, you'll double your eco-friendliness, avoid hours of shopping, and be able to infuse your space with your own personal flair and style. Who knew saving time, money, and the environment could be so much fun? A collection of practical advice, fabulous container projects, and stunning examples of how gardeners around the world are successfully transforming urban spaces into abundant fruit and vegetable plots, *The Edible Balcony* is your guide to creating attractive, responsible, and thoroughly rewarding small space gardens—and perhaps never having to settle for grocery store produce again.

It doesn't get any more fresh, local and organic than this – flowers and produce grown on your own balcony or rooftop. Alex Mitchell is the English garden writer (Sunday Telegraph) and crusading gardener who has published this very interesting and highly entertaining book on making good use of very small spaces. Not everyone, after all, has broad acres of sunny garden space, but everyone wants to live well and eat well. The reasons for balcony gardening are several and compelling, starting with the best and most important ones: because you want to and it's just plain fun. More serious reasons are that it transforms often bare and ugly spots into attractive areas bursting with fresh life. The produce it yields is local and organic, it is riper, tastes better and is better for you. Did you know the average bit of salad greenery from the grocery store traveled 1400 miles to reach your plate, and are you OK with that? I, for one, am not. Balcony and rooftop gardens keep cities cooler, reduce air and noise pollution, help control rainwater runoff, and provide habitat diversity where it is sorely needed. And, a bonus, most such gardens are out of the reach of many destructive pests like snails and slugs. There are two more reasons for this kind of gardening. First, it is important for every person to have a connection to the land and space we inhabit, and for that land and space to feed us, not just literally but figuratively as well, and this is especially true for urban children. Even if it is only a simple herb garden, that cup of mint tea or that bit of basil in our salad is an essential connection between us and where we live.
